PROFILE SUMMARY

Results-driven **Full Stack Developer with 1.5+ years of experience** specializing in the **MERN stack**, with hands-on experience in developing end-to-end web applications in the fintech domain. Skilled in building responsive user interfaces and maintaining scalable applications, with **strong expertise in frontend development**, API integration, and secure data handling. Seeking a role where I can leverage my MERN experience to contribute to impactful projects while continuously enhancing my **full-stack development skills**.

SKILLS

- **Frontend Technologies:** HTML5, CSS3, JavaScript (ES6+), Bootstrap, React.js
- **Backend Technologies:** Node.js, Express.js, REST APIs, C# (basics)
- **Databases :** MongoDB, MySQL, SQL (SSMS)
- **Cloud Services (Familiar With):** AWS (EC2, S3, Lambda, CloudFront), Docker, Kubernetes

EXPERIENCE

Unlock Technologies | Software Engineer

Nov 2024 - Present

- Developed and maintained fintech applications using the MERN stack delivering products for **payments, loans, wallets, analytics, and merchants** and contributed to **.NET Core MVC**-based projects by developing the frontend layer collaborating closely with backend teams for API consumption and UI implementation.
- Built scalable **React.js interfaces** with REST API integration, reusable components, performance optimizations, **version control using Git**, and **production-ready frontend deployments** on local servers.

PROJECTS

1. DigiKhata SDK – Paypoint

[Live](#) / [Demo](#)

- Developed a secure wallet onboarding SDK enabling users to create digital wallets through Aadhaar OTP or biometric-based KYC, integrated via an iFrame model.
- Implemented API-driven workflows and **AES encryption** to ensure data security and smooth integration.

2. Hitachi TCO Tool -

[Live](#)

- Built a **Total Cost of Ownership analysis tool** to compare transformer designs based on cost, energy losses, GHG emissions, IRR, and payback period.
- Enabled evaluation of multiple transformer units under various decarbonization scenarios, supporting data-driven engineering decisions.

3. Loan Journey Applications -

[Live](#) / [Demo](#)

- Developed end-to-end **loan application workflows** including OTP authentication, PAN/Aadhaar verification, bank validation, KFS generation, and e-signature. with a focus on **performance optimization and reliability**.
- Designed optimized multi-step user journeys to improve **conversion rates, compliance, and user experience**.

4. VR Maritime – Team Project(4)

[Live](#) / [Demo](#)

- Built a web application for inventory, finance, and vessel management with efficient state handling using Redux.
- Implemented modules for **invoicing, currency exchange, and vendor-customer management**, streamlining shipping operations. Used **React Router** for seamless navigation and **React Hook Form** for optimized form handling and validation.

5. Transaction Stack – Merchant Portal

[Live](#) / [Demo](#)

- Developed a **merchant analytics dashboard** displaying payment success rates, orders, and transaction history.
- Implemented role-based authentication and **real-time transaction status tracking** (success, failed, pending).

EDUCATIONAL BACKGROUND

B.E in Computer Engineering - 2024

CGPA 7.77 /10

CERTIFICATIONS

AWS, Cloud Practitioner CLF-C02

July 2025

IBM, Python for Web Development

Aug 2024
